

Optimization	What I changed	Impact
Font loading	Removed the external Google Fonts import and used a system font stack	Removed an external request from the critical rendering path
Responsive layouts	Tested and adjusted layouts specifically at 360px, 768px and 1440px	Prevented overflow and maintained intentional layouts across devices
Semantic structure	Used header, nav, main, section, article, form and footer appropriately	Improved document structure and accessibility
Form accessibility	Added labels, field errors, ARIA attributes and visible focus states	Improved keyboard and assistive-technology usability
Reduced motion	Added prefers-reduced-motion handling	Respects user accessibility preferences
Metadata	Added title, description, language, viewport metadata and custom favicon	Improved SEO and removed Vite starter branding
Visual assets	Built the hero dashboard using CSS/HTML instead of large image assets	Kept asset weight low while retaining visual interest
